

TRACE ATMOSPHERIC CONSTITUENTS

Properties, Transformations, and Fates

Edited by

Stephen E. Schwartz

Environmental Chemistry Division
Brookhaven National Laboratory
Upton, New York

A WILEY-INTERSCIENCE PUBLICATION

JOHN WILEY & SONS

New York | Chichester | Brisbane | Toronto | Singapore

CONTENTS

1. Kinetics of Reactive Dissolution of Nitrogen Oxides into Aqueous Solution
Stephen E. Schwartz and Warren H. White
2. Reactions of Sulfur(IV) with Transition-Metal Ions in Aqueous Solutions 117
Robert E. Huie and Norman C. Peterson
3. Catalytic Autoxidation of Aqueous Sulfur Dioxide in Relationship to Atmospheric Systems 147
Michael R. Hoffmann and Scott D. Boyce
4. Role of Carbon Particles in Atmospheric Chemistry 191
Shih-Ger Chang and Tihomir Novakov
5. Organic and Inorganic S(IV) Compounds in Airborne Particulate Matter 221
Delbert J. Eatough and Lee D. Hansen
6. Sulfur, Acidic Aerosols, and Acid Rain in the Eastern United States 269
John W. Winchester
7. Lagrangian Studies of Atmospheric Pollutant Transformations 303
Bernard D. Zak
8. Turbulent Transport of Ozone to Surfaces Common in the Eastern Half of the United States 345
Marvin L. Wesely

xiv Contents

9.	Fate of Nitrogen Oxides in Urban Atmospheres	371
	<i>Larry G. Anderson</i>	
10.	The Global Budget of Atmospheric Nitrogen Species	411
	<i>Donald H. Stedman and Richard E. Shetter</i>	
11.	Construction and Testing of a Surrogate CHEMical MEchanism (SCHEME) for Tropospheric Photochemical Reactions	455
	<i>Stuart Z. Levine and Stephen E. Schwartz</i>	
12.	Modeling of Transport and Chemical Processes that Affect Regional and Global Distributions of Trace Species in the Troposphere	493
	<i>Leonard K. Peters and Gregory R. Carmichael</i>	
	Index	539
